Rider Buckle Install Guide

Proper Installation Methods

Example 1: Illustrates how **not** to install. If the stirrup leather interferes with the **locking tab** the rider will not be able to **unlock** the buckle.

(1)

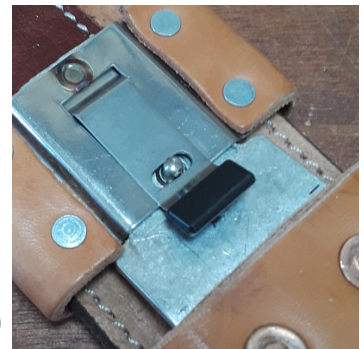

Example 2 : Rider should have easy access to unlock. When **retrofitting** the **Rider Buckle** to a saddle and the stirrup leather **interferes** with the **locking tab** you can use a half-round tool to notch the stirrup leather giving the Rider easy access to the **tab**.

Example 3 : How to set the tongue of the **Rider Buckle** on a **new saddle build**.

(4)

(3)

Example 4: **Always** set the burr on rivet with the locking pin in position pictured. This will ensure that you do not damage the locking pin when setting the burr on the rivet.

Note:

- Always check the fit of the sleeve on your stirrup leather after the install.
- The sleeve is preset during manufacturing to allow easy adjustment.
- Sleeve may need further adjustment depending on thickness of stirrup leather.
